Magnesium Fulvate

 BUDGET
CHELATES™

Magnesium is to chlorophyll what iron is to blood.

Magnesium nitrate is more rapidly absorbed than magnesium sulphate, but when it is combined and complexed with fulvic acid and mannitol it can provide a powerful punch to address a magnesium shortage.

Benefits

- Magnesium is the most important mineral involved in photosynthesis and also boosts phosphate uptake.
- Fulvic acid and kelp are powerhouse plant growth promoters.

Miscellaneous

- Note: Product in 1000 L tanks may weigh over 1 tonne. Forklift with 2 tonne lifting capacity is recommended.
- Magnesium deficiency can be induced by over application of calcium or potassium.
- Most crops will benefit from a foliar spray of Magnesium Fulvate because the vast majority of crops do not contain the luxury levels of magnesium that are required for optimum photosynthesis.
